Angad Singh

647-964-3458 | Singa401@mcmaster.ca | angad-singh23 | angxd1 | angad-portfolio1.vercel.app

SKILLS

Languages : Python, C, Java, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks & Libraries : Next.js, React, FastAPI, Streamlit, Tailwind CSS, Framer Motion, Pandas, NumPy, Matplotlib
Tools & Platforms : Git, GitHub, VS Code, SQLite, Docker, PostgreSQL, Redis, Pytest
Concepts : Object-Oriented Programming (OOP), REST APIs, Data Structures & Algorithms
Cloud / AI / Data : AWS (EC2, S3), OpenAI API, Google Gemini API, WebSockets, SSE, Prompt Design, Data Validation

EXPERIENCE

CloudSynApps June 2026 – August 2026
Software Engineer Intern Mississauga, ON
- Contribute to client-facing software and cloud solutions as part of a consulting delivery team, spanning research, development, and technical documentation across the project lifecycle
- Build and refine internal enablement material on cloud and AI tooling, translating evolving platform capabilities into clear, practical guidance for the team

AWS Student Builder Group (McMaster University) May 2026 – Present
President Hamilton, ON
- Lead the McMaster chapter as **President**, building and directing a cross-functional executive team across **Technical, Events, Finance, Socials, and 1st-Year Rep** roles to grow the group's membership and campus presence
- Set the term roadmap and deliver hands-on **cloud & AI programming** workshops, technical talks, cloud labs, and project nights that give students real-world experience with AWS services
- Drive outreach and community growth through **LinkedIn/Instagram** campaigns and student initiatives, coordinating event delivery with AWS support using GitHub, Slack, and Notion

PROJECTS

Dextera - Smart-Glove Rehab Platform | *React, TypeScript, Node.js, Express, PostgreSQL, WebSockets, ESP32, MediaPipe*
- Built a **smart-glove rehabilitation platform** streaming live finger-motion data from an **ESP32** (five flex sensors) into a **real-time clinician dashboard over WebSockets**, turning post-stroke hand therapy into measurable, game-based recovery
- Engineered the full stack: **Node/Express** API with **PostgreSQL** persistence, a serial bridge converting raw ADC readings into calibrated bend percentages, gesture classification, **React Three Fiber** + **MediaPipe** rehab games, and **Gemini-assisted** patient summaries

Doceo - AI-Powered STEM Tutoring | *Next.js, TypeScript, FastAPI, Google Gemini API, SSE*
- Built an interactive AI tutoring product with **front-end desktop app** experience: generates step-by-step STEM lessons, streams voice narration, and animates a whiteboard-style explanation in sync
- Designed Gemini-based prompt pipelines for structured lesson generation and synced narration with animated whiteboard playback via SSE streaming

Data Health Console | *Python, Streamlit, Pandas, NumPy, Matplotlib, SQLite, Pytest*
- Developed a **quantitative data-quality scoring system (0–100)** using penalty-based diagnostics for missing values, duplicates, structural issues, and outliers applying statistical methods for ongoing data analysis
- Engineered modular backend architecture with SQLite persistence for dataset history, cleaned snapshots, and generated reports; applied statistical outlier detection; added automated test coverage with Pytest

OpenClaw Workshop on AWS | *AWS EC2, S3, OpenAI API, FastAPI, Python, Whisper, Discord*
- Designed and delivered a **hands-on cloud workshop** where students build a local AI note-taking app and deploy an OpenClaw agent on AWS, documenting the full development process for reproducibility
- Guided students through EC2 setup, API integration, and Discord connectivity; studied and communicated model tradeoffs through clear technical documentation

LEADERSHIP & EXTRACURRICULARS

Garth Webb Secondary School Sept 2024 – June 2025
DECA Club - Lead Mentor
- Led and mentored **30+ students** in business problem solving, competitive case analysis, and presentation development
- Organized training sessions and mock competitions simulating real-world business scenarios

EDUCATION

McMaster University Sept 2025 – Apr 2029 (Expected)
Candidate for BASc, Computer Science Hamilton, ON, Canada
